22850 7590 05/07/2007 OBLON, SPIVAK, MCCLELLAND, MAIER & NEUSTADT, P.C. 1940 DUKE STREET ALEXANDRIA, VA 22314			EXAMINER KIM, EUNHEE	
			ART UNIT 2123	PAPER NUMBER
			NOTIFICATION DATE 05/07/2007	DELIVERY MODE ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

patentdocket@oblon.com
oblonpat@oblon.com
jgardner@oblon.com

Office Action Summary	Application No.	Applicant(s)	
	10/511,033	MONIN ET AL.	
	Examiner	Art Unit	
	Eunhee Kim	2123	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 31 January 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 11-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 11-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 31 January 2007 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. The amendment filed 01/31/2007 has been received and considered. Claims 11-20 are presented for examination.

Response to Applicant's Remarks & Examiner's Withdrawals

2. Examiner respectfully withdraws Claim Objections in view of the amendment and/or applicant's arguments.

Information Disclosure Statement

3. The information disclosure statement filed 03/14/2005 is being considered by the examiner. However, the reference AD and AK have not been considered because the translation was not submitted.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 11-17 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by El-Sayed et al. (Automated Performance Modeling from Scenarios and SDL designs of Distributed Systems).

El-Sayed et al. discloses (Claim 11) a process for generating a performance model from a functional model for a system (Abstract) including a plurality of distributed hardware (Fig. 1, Configuration Information) and software entities (Fig. 1 Scenario) that engage to provide a service to at least one user (Fig. 1), the process comprising:

distributing representative system requests in a finite number of groups and identifying (Fig. 2, Chapter 2), for each request group, a corresponding execution flow, the distributing of the requests being determined by a service being called upon and by characteristics of customer specific behavior (Fig. 2, Chapter 2), and the execution flow for each request group corresponding to a software entity execution linking, in sequence and/or in parallel, induced by a group request (Fig. 1-3, Second column of the page 128, Chapters 2 and 3);

formalizing the execution flows using a notation allowing identification of causal relationships between different software entities of the system that are involved in the execution flows and information quantifying the system's resource consumption (Fig. 1-5, Chapter 3);

developing an intermediate model that comprises, in addition to the formalized execution flows, a resource specification that specifies physical hardware of the system, and an environment specification that quantifying the amount of requests generated by said at least user (Fig. 1-5, Chapter 3-4); and

automating conversion of the developed intermediate model into a performance model (Fig. 6, Chapter 5);

(Claim 12) wherein the performance model derived from the developed intermediate model is dedicated to pre-existing software simulators using queuing network techniques (Fig. 1, Chapter 3);

(Claim 13) wherein the distributing the requests in a finite number of request groups is determined by the service being called upon, and by characteristics of the customer specific behavior that affect a way in which the service being called upon is delivered (Fig. 4-6, Chapter 3);

(Claim 14) wherein the execution flow for each request group is determined by the software entity execution linking, in sequence and/or in parallel, induced by a group request (Fig. 4-6, Chapter 3);

(Claim 15) wherein topology of a queuing model derived from the conversion is wholly determined by the execution flows corresponding to the request groups (Fig. 4-5, Chapter 3);

(Claim 16) wherein derivation of a performance model dedicated to a pre-existing simulator based on queuing network techniques can be automated by adapting correspondence rules proposed (Fig. 4-5, Chapter 3-4);

(Claim 17) wherein formalism of phases is achieved using an extension of a MSC (Message Sequence Charts) formalism (Chapter 2); and

(Claim 20) wherein the intermediate model developed comprises the formalized execution flows characterizing the behavior of software entities and their interactions, at least one resource specification specifying the physical hardware, and at least one environment specification representing user behavior (Chapter 3, Second Column of page 129).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2123

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

9. Claims 18 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over by El-Sayed et al. (Automated Performance Modeling from Scenarios and SDL designs of Distributed Systems), in view of Alur et al. (US Patent No. 6,324,496).

El-Sayed et al. teaches most all of the instant invention as applied to claims 11-17 and 20 above.

El-Sayed et al. teaches (Claim 18) wherein the formalism of a graph of phases and execution flows with a plurality of nodes representing phases constituting the service (Fig. 5-6, Chapter 3-4); and

at least one oriented arc leading from a first node to a second node representing linking in a two-phase sequence (Fig. 5-6, Chapter 3-4);

(Claim 19) at least one node followed by plural arcs oriented in parallel (Fig. 5-6, Second column of the page 128).

El-Sayed et al. fails to teach (Claim 18) HMSC (High level Message Sequence Charts) and (Claim 19) at least one node followed by plural arcs oriented as a function of choice of a following phase depending either on a condition external to the system, or on an internal condition related to a current status of the system.

Alur et al. teaches (Claim 18) HMSC (High level Message Sequence Charts) (Fig. 1-2, Col. 4 lines 24-67, Col. 5 lines 24-40); and

(Claim 19) at least one node followed by plural arcs oriented as a function of choice of a following phase depending either on a condition external to the system, or on an internal condition related to a current status of the system (Fig. 1-2, Col. 4 lines 24-67, Col. 5 lines 1-23).

El-Sayed et al. and Alur et al. are analogous art because they are both related to performance modeling.

Therefore, it would have been obvious to one of ordinary skill in the art of at the time the invention was made to include HMSC and the function of choice method of Alur et al., with the method of performance modeling of El-Sayed et al. because Alur et al. teaches advantages of model checking method with an efficient algorithm at a minimal price (Col. 14 lines 20-26).

Response to Arguments

10. Applicant's arguments filed 01/31/2007 have been fully considered but they are not persuasive.

Regarding Information Disclosure Statement:

It is an applicant's duty to disclose information which may be a material to the patentability of application. In this incident, the Examiner is not able to obtain the copy of English translation. There was only one IDS submitted in the case, and it has the date of 3/14/05, not 10/13/04.

Regarding Claim Objection:

Applicant contends that since the present invention includes a plurality of request groups and an execution flow is associated with each request group. Therefore, "the execution flows" and "the request groups" have proper antecedent basis, and therefore definite. Examiner respectfully disagrees because the claim does not recite "a plurality of request groups", but instead, Claim 11 recites "a finite number of groups" in line 4. Since "a finite number" could be only one, it does not set forth "the request groups" and "the execution flows" to have antecedent basis and definite.

Regarding 102 Rejection:

Applicant contends that El-Sayed does not disclose formalizing the execution flows using a notation allowing identification of information quantifying the system's resource consumption.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a notation allowing identification of information quantifying the system's resource consumption) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

However, the claims recites the limitation of "a notation allowing identification of causal relationships between different software entities of system", and the Examiner takes position that El-Sayed discloses the cited limitation above because various arrows and notations of Figures 4-6 that represent RPC request, Asynchronous message, Forwarded RPC, Reply message, Computation Activity, and Communication activity correspond "a notation allowing identification of causal relationships between different software entities of system.

Applicant contends that El-Sayed does not disclose information quantifying the system's resource consumption.

Examiner disagrees since El-Sayed discloses configuration information which gives task allocation, task priority, and arrival rates of events (Figure 1) and a resource consumption value for CPU consumption, storage operations, and any other operations of the task to carry out the execution step that is available from a repository of "resource function" indicated in Figure 1 (Second paragraph of Page 126), where it is information that is quantifying the system's resource consumption.

Regarding 103 Rejection:

Applicant contends that since Alur does not remedy the deficiency discussed above, a *prima facie* case of obviousness has not been presented.

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). Therefore, examiner takes position that a *prima facie* case of obviousness has been established.

Conclusion

11. **THIS ACTION IS MADE FINAL.** See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
